

### DSHD105 Hinge Pin Door Stop Installation Instructions

1. Close the door. Slide the tip of a straight-slot screwdriver under the head of the hinge pin on the door's upper hinge. Pry the hinge pin up and remove it. If necessary, tap the screwdriver gently with a hammer to lever the pin up.
2. Insert the hinge pin into the hole in the stopper assembly from above, so that the shank of the pin extends below the assembly. Use the nylon bushing if necessary (for 1/4" dia hinge pins). Slide the pin back into the hinge. This leaves the stopper assembly resting on top of the hinge and the pin holding it in place. Tap the pin gently with the hammer to settle it into the hinge if necessary.
3. Turn the threaded screw attached to the rubber bumper by hand to adjust the door's maximum angle of swing. The more you turn the screw, the sooner the stopper halts the door. Open the door to test the setting, and readjust it as necessary until the door stops where you want it to.
